AUD \$39.00

Product Images

Short Description

- Four real arthropod specimens provide a wide range of opportunities for examination and discovery
- No special preservation or handling required - ready to use right out of the package
- Specimens in resin helps you observe the insect from all angles

Description

Bug out with this set of 4 real, 3D insect specimens perfectly preserved in resin. These specimens are ideal for observing and

imaging with any Celestron digital microscope. Crystal clear resin lets you observe the insects from all angles. Use them for school projects, research, and more.

These specimens make the perfect gift for the young scientist in your life. They'll love learning about fascinating insects from around the world and studying their anatomy up close. Your little entomologist can even display the insects in his or her room when not in use.

This kit includes:

- Chinese Scorpion (*Buthus martensi* Karsch)
- Golden Cicada (*Proretinata vemacula*)
- Spiny Orb-weaver (*Gasteracantha* sp.)
- Golden Spotted Leaf Beetle (*Oides duporti* Laboissiere)

Celestron offers sets of 3D bugs to choose from: collect them all!
