Celestron Polar Finderscope for CGX and CGX-L

AUD
\$219.00

Product Images

Short Description

- Custom made for CGX and CGX-L Mounts
- Adjustable bracket angle for best accessibility
- 6x magnification
- Simple reticle map easily locates the celestial pole without the need to reference an app or location & time
- Scope tilt is adjustable to allow for accurate polar alignment

Description

The optional Polar Axis Finderscope for the CGX series provides an easy, straightforward way to polar align your mount. The Polar Finderscope includes a dovetail base bracket that attaches to the CGX. The finder bracket itself can be removed from the dovetail for storage. Designed specifically for CGX and CGX-L, the bracket angle is adjustable to accommodate the most accessible viewing angle for your setup.

The reticle displays Octans (as well as northern references) in relation to the South Celestial Pole, so you can be accurately aligned without the need to reference an app or specific date/time/location info.
