

## Dew Not Telrad Heated Dew Shield

**AUD \$59.00**

### Product Images

### Short Description

Made for the very popular Telrad finder scopes.

**NOTE:** Sirius Optics recommends that any dew heater strap or heated dew shield be connected to a dual channel dew controller and not directly to 12V.

This allows the user to regulate the current and temperature of the dew heater strap or dew shield.

The recommended control unit is the Astrozap Dual Channel Dew Controller (Product No. 124474)

## Description

---

The Telrad Dew Shield is effective in light dewing conditions. It helps keep condensation from forming on the glass plate of your Telrad. The Telrad Dew Shield attaches to the back of the Telrad unit on hinges using existing screws, and swivels into place to shield the combining glass slowing dew condensation. It is made of lightweight yet strong ABS plastic.

Dew Not has now introduced a more effective version of the Telrad Dew Sheild. They've taken the same Dew Shield from Telrad and integrated a small Dew Not heater strip directly on the inside of the Dew Sheild. This results in even more effective dew control for your Telrad reflex finder.
