## Short Description

---

Explore Scientific Waterproof Eyepieces - Comfort, Quality, Value.

## Description

---

The 1.25" diameter 10mm 52 degree eyepiece is a standard focal length for your collection.

Fainter deep sky objects that do not have the inherent brightness to be observed at higher powers are often perfect for a 10mm. The Explore Scientific 52° Series eyepieces are excellent flat-field multi-element oculars that can transform your visual astronomy experience. With an apparent field of view of 52 degrees, these eyepieces offer incredible value in a very nice eyepiece. Expect exceptional quality and value versus a comparably priced Plossl.

Another great benefit of these eyepieces is the excellent contrast and ease with which you can gaze, not directly at an object, but slightly to either side. This skill, called using averted vision, is especially helpful when observing faint objects, because using averted vision puts the image on a part of your eye that is more sensitive to light, allowing you to see fainter images.

**NOTE:** This is a 1.25" diameter eyepiece.
