NOTE: Recommended as a perfect fit for MAK 127 Telescope OTA's

Description

Meade's all new Glass White-Light Solar Filters are the perfect accessory to transform your telescope into a SAFE way to view the Sun ! Available in 10 different sizes for viewing and imaging the sun in white-light. Our aluminum housing, reflective helios solar glass filters block 99.999% of incoming light for protection and are ISO certified, guaranteeing safety with correct use. Easy attachment with three screws (included).

Warning: Meade White-Light Solar Filters are only intended for closed tube telescopes and should not be used with open truss design telescopes such as Dobsonians. Incident sunlight allowed in by the open tube design could cause damage to the telescope optics and can cause instant and irreversible eye damage potentially including permanent blindness from light coming in through the side of the open tube onto the optics. A light shroud is not sufficient protection from harmful solar rays .

This 5.75" (145 mm) Glass White-Light Solar Filter is a perfect fit for 127 MAK scopes (Celestron and Sky Watcher) and is also compatible with the following scopes:

- Infinity 102
- LX70 5"
