Meade Mega Wide Angle 15 Mm 2in Eyepiece

AUD
\$399.00

Product Images

Short Description

Sharp, pin-point images from the center all the way to the edge of its Mega 100 Degree Apparent Field of View.

Description

The right eyepiece can make or break any telescope. After all, why squint through a tiny pinhole when you can linger at a dramatic

window on the universe and examine every detail? Meade Series 5000 eyepieces offer revolutionary new advances in resolution, image correction and eye relief at irresistible prices. You simply won't believe how a premium eyepiece improves your view, no matter what scope you own. See pinpoint resolution edge-to-edge with luxuriously long eye relief. If you think our Series 5000 eyepieces look good on the outside, wait until you see the heavens through one.

The 100 degree apparent field of view MWA eyepieces currently are Meade's widest angle eyepiece. Experience bright, sharp, sweeping vistas of the heavens; vistas so large that you feel that you are "sky-walking" through the skies.

This parfocal Mega Wide Angle Series 5000 Eyepieces uses 8 optical elements to achieve a high contrast image with razor sharp correction all the way to the edge of their huge 100 degree apparent field of view. These lenses are Fully Multi-Coated with blackened edges and fold-up rubber eyecups.

For uncompromising views that make any telescope better, order these eyepieces today. You have to see the universe through one to believe it.

Additional Information
