Orion Narrow Universal Dovetail Plate

AUD \$96.00

Product Images

Short Description

- Dovetail mounting plate fits narrow Vixen-style saddles as found on Orion AstroView EQ, SkyView Pro EQ, Sirius EQ-G, and unaltered Atlas EQ-G telescope mounts
- Also fits the dovetail saddle found on Orion VersaGo II, SkyView AZ, and TeleTrack altazimuth telescope mounts
- Multiple holes along the length lets you mount equipment right where you need it
- Attach all manner of accessories including telescope tube rings and astrophotography cameras equipped with a tripod socket
- Black anodized, machined aluminum construction for rigid support of attached telescopes and accessories

Description

Most dovetail plates will only fit rings at predetermined spacings, because there are only a small number of holes tapped into them. With Orion's new narrow universal dovetail plate, you have more holes, more options and far more versatility.

If your optical tube has rings that may not fit the hole spacing of standard dovetail bars, Orion's narrow universal plate is the answer. It has many holes spaced along its length so any possible ring spacing that you need is available. Two slots have been added for extra versatility in the spacing combinations. Cameras and other accessories with tripod sockets can easily attach to this narrow dovetail plate, wherever you need to place them.

With this universal dovetail plate, you'll have a secure connection and perfect placement — no matter what tube you're using to explore the universe!
