Sirius 2 inch LRGB Filter Set

AUD
\$299.00

Product Images

Short Description

--

Description

These filters provide a natural color reproduction of planets, stars, emission- and reflection nebulas. The transmission properties of the L-RGB Typ 2c filters are optimized for CCD astrophotography. The set allows to take images in correct colour for all types of objects. Where other brands make strange compromises, we do the best colour reproduction possible. Both stars as well as objects that emit only in spectral lines, are reproduced in their true colours. You get CCD images with perfect colours, as if the objects were bright enough to be seen with photopic vision.
