## Short Description

---

--

## Description

---

The **flatfield eyepieces** are ideal **all-rounder** for deep sky and also planets with an excellent sharpness performance.

The eyepieces have a very high quality coating and offer excellent sharpness in the field so that they are equally suitable for the deep-sky observation of nebulae and galaxies but also good for the moon and planets. The eyepieces are mutually **parfocal (homofocal)** , so that refocusing the eyepiece is not necessary.

The eye **relief** can be easily adjusted with the large **rubber eyecup** . Due to the large eye lens, the eyepieces offer a comfortable viewing behavior.
