Sirius Optics Colour Filter No. 47 Violet 1.25 Inch

AUD \$20.00

Product Images

Short Description

Enhances:

- Lunar detail

- Polar ice caps of Mars in large telescopes
- Polar regions on Saturn
- Limb hazes and terminator clouds of Mars
- Clouds and atmospheric haze on Venus, reduces glare

Description

Since Lunar and Planetary surface details and atmospheric phenomena reflect sunlight as contrasting colors, you can use color filters to accentuate subtle details for planets, comets, and the Moon by selectively increasing contrast between features and markings of different hues.

By using various colour filters, you can make planetary detail easier to see, and also by stacking multiple filters to combine filtration effects, you can get unique results.

The filters screw on to the thread at the bottom of an eyepieces. They can also be used with filter wheels and/or filter sliders for quick and convenient swapping during viewing sessions to compare differently filtered views.

Additional Information

Specifications	Size	1.25"
	Light Transmission	3%
	Colour	Violet
