Product Description

All Pro cameras (with cooler) need to be connected to an external 11-14v power supply to image.
Even when the cooler is not being used the power supply must be used for the camera to be recognized.

ASI2600MM Pro uses Sony’s latest back-illuminated IMX571 APS-C format native 16-bit ADC sensor. It’s one of the most anticipated astronomy cameras of 2021. Here is some of the reasons why:

- Ultra-high 14 stops dynamic range
- Ultra-low 1.0e readout noise
- Innovative breakthrough design resulting in zero amp-glow
- 16-bit ADC sensor

Like the colour version, the ASI2600MM Pro also has a very light weight of just 700 grams.
