saxon 80/400 Pioneer Refractor OTA

AUD
\$249.00

Product Images

Short Description

This short-tube refractor telescope has wide field views, thanks to its achromatic objective lens of 80mm and focal length of 400mm.

Description

This scope is commonly used as a guide scope on bigger astronomy set ups. With the use of a correct image diagonal it also makes a superb terrestrial telescope when mounted on an alt-azimuth mount. The compact length of the telescope makes it convenient for it to be packed up and stored away while not in use, or in transit.

Fully Multi-Coated Objective Lens

This 80/400 Saxon OTA has an 80mm aperture size and a 400 mm focal length. This little scope is perfectly suited to terrestrial viewing, occasional celestial moon viewing and low powered astronomical observation.

The **saxon 80/400 Pioneer Refractor OTA** features the following:

- 80mm multi-coated achromatic objective lens
- 400mm focal length
- 6x30 finderscope
- Photography is possible via an optional T-2 adapter ring.
